NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date a previous issue published in December, 1961. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this report will be published every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the revised Standard Industrial Classification which shows twenty major manufacturing groups in place of the seventeen groups shown under the old industrial classification. The following are the major changes:

1. Knitting Mills, previously included as part of the Clothing Industries, now form a separate group.
2. Furniture and Fixtures, previously included as part of the Wood Industries, now form a separate group.
3. The Iron and Steel Products and the Non-Ferrous Metal Products Industries have been combined and are now treated as three major groups: Primary Metal Industries, Metal Fabricating Industries and Machinery Industries.
4. The printing of house organs has now been deleted from the Printing, Publishing and Allied Industries group.

In addition to the above, custom tailoring has been deleted from the manufacturing industries and is now classified in the trade field.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous report was prepared, 1,169 new names have been added as a result of information received. During this same period, 764 names which appeared in the December 1961 issue have been dropped from the listings. Of those deleted 472 were firms now included in Industry and Merchandising annual reports, 34 were duplications because of change in the firm name, further contact revealed that 116 were out of business and 66 were not manufacturers as originally reported and the remainder, 76, were discarded for various reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry and Merchandising Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual operations commencing at some considerable time after this action has been taken.

NEW MANUFACTURING ESTABLISHMENTS, 1950-61

The following material presents in tabular form the number of manufacturing establishments reporting for the first time in the annual Census of Manufactures in each year from 1950 to 1957 and which are still active in the manufacturing field. Data for the years 1958 to 1961 are the results of a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations commenced during those years. This, however, is subject to revision when the establishments concerned have reported in the annual Census of Manufactures and more solid information is available.

During the period under review there were 16,678 manufacturing establishments which started operations and are still active. The number of new entrants increased steadily to a peak in 1960, with the exception of a decline in 1957 (Table 1). Data covering the year 1961 are expected to be revised upwards. This trend was followed in most industries except Knitting Mills, Clothing, Furniture and Fixtures, Machinery, and Transportation Equipment, where the upward trend was maintained through 1957.

Throughout the period the Wood, Furniture and Fixtures Industries accounted for 30.2 per cent of the total number of new establishments, the Foods and Beverages, the Metal and Machinery Industries and the Clothing Industries together accounted for an additional 35.4 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries (excluding House Organs) 7.8 per cent and 7.1 per cent respectively.

Provincial distribution (Table 2) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, each of which accounted for more than 30 per cent of the total, followed by British Columbia and Alberta where 15 and 7 per cent respectively of the new businesses located. This overall pattern is paralleled in nearly all industries, the most notable exception being in the Wood Industries where the heaviest concentration was in British Columbia. In this industry the number of new establishments in British Columbia was as great as the number located in Ontario and Quebec together.

Breakdown by country of origin (Table 4 and 5) reveals that 983 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 804, accounting for 82 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries followed by the Chemical Products and the Electrical Products Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Food and Beverages Industries, where domestic raw materials are readily available. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

TABLE 1. New Manufacturing Establishments, 1950-61
by Industry and Year of Commencement

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date a previous issue published in June 1962. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this report will be published every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the revised Standard Industrial Classification which shows twenty major manufacturing groups. A complete listing of establishments in operation or about to start operations in any one industry can be secured by using this memorandum along with the most recent Industry and Merchandising Annual Report.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous report was prepared, 1,049 new names have been added as a result of information received. During this same period, 1,094 names which appeared in the June 1962 issue have been dropped from the listings. Of those deleted 661 were firms now included in Industry and Merchandising annual reports, 50 were duplications because of change in the firm name, further contact revealed that 216 were out of business and 86 were not manufacturers as originally reported and the remainder, 81 were discarded for various reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry and Merchandising Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual operations commencing at some considerable time after this action has been taken.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date a previous issue published in December 1962. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this report will be published every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification which shows twenty major manufacturing groups. A complete listing of establishments in operation or about to start operations in any one industry can be secured by using this memorandum along with the most recent Industry and Merchandising Annual Report.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous report was prepared, 816 new names have been added as a result of information received. During this same period, 1,023 names which appeared in the June 1962 issue have been dropped from the listings. Of those deleted 676 were firms now included in Industry and Merchandising annual reports, 33 were duplications because of change in the firm name, further contact revealed that 149 were out of business and 65 were not manufacturers as originally reported and the remainder, 100 were discarded for various reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry and Merchandising Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual operations commencing at some considerable time after this action has been taken.

NEW MANUFACTURING ESTABLISHMENTS, 1953-62

The following material presents in tabular form the number of manufacturing establishments reporting for the first time in the annual Census of Manufactures in each year from 1953 to 1962 and which are still active in the manufacturing field. Data for the years 1958 to 1962 are the results of a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations commenced during those years. This, however, is subject to revision when the establishments concerned have reported in the annual Census of Manufactures and more solid information is available.

Data summarized in Table 1 show a decline in all years under review, when compared with corresponding tabular material in the June, 1962 issue of this publication. This is a direct result of the application of the revised concept of a manufacturing establishment. Many firms previously considered as manufacturing have now been reclassified to the trade field or some other non-manufacturing industry group. Data covering the year 1962 are preliminary and are expected to be revised upwards.

Throughout the period the Wood, Furniture and Fixtures Industries accounted for 26.2 per cent of the total number of new establishments, the Foods and Beverages, the Metal and Machinery Industries and the Clothing Industries together accounted for an additional 36.1 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries 8.1 per cent and 7.8 per cent respectively.

Regional distribution (Tables 1A to 1E) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, each of which accounted for more than 30 per cent of the total, followed by British Columbia with 15 per cent and the Prairies and Maritimes with 12 per cent and 6 per cent respectively. This regional pattern is followed generally in all industries except Clothing, Wood and Metal Fabricating and Machinery. In the Clothing Industry the heaviest concentration of new firms is in the province of Quebec, which accounts for about 70% of the total in this industry. British Columbia reports the greatest number of new firms in the Wood Industry with Quebec and the Maritimes also showing a large number of new businesses in this field. In the Maritimes the number of new firms classified to the Wood Industries accounts for almost half of the total new firms in that area. In the Metal Fabricating and Machinery Industries, almost one half of the new entrants in these fields are in Ontario.

Breakdown by country of origin (Table 4 and 5) reveals that 883 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 729 (over 60% of which were in Ontario), accounting for 83 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries followed by the Chemical Products and the Electrical Products Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Food and Beverage Industries, where domestic raw materials are readily available. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

This report revises and brings up to date a previous issue published in June 1963. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this report will be published every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification which shows twenty major manufacturing groups. A complete listing of establishments in operation or about to start operations in any one industry can be secured by using this memorandum along with the 1960 Industry Division Annual Report, which is the most recent issue listing the establishments reporting to the annual census of manufactures.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last annual report listing the names of respondents, was published for each industry. In most cases, these were the publications covering the year 1960. Since the previous report was prepared, 1,260 new names have been added as a result of information received. During this same period, 554 names which appeared in the June 1963 issue have been dropped from the listings. Of those deleted 259 were firms now included in Industry Division annual reports, 20 were duplications because of change in the firm name, further contact revealed that 133 were out of business and 68 were not manufacturers as originally reported and the remainder, 74 were discarded for various reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual operations commencing at some considerable time after this action has been taken.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date a previous issue published in December 1963. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this report will be published every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification which shows twenty major manufacturing groups. A complete listing of establishments in operation or about to start operations in any one industry can be secured by using this memorandum along with the most recent Industry Division Annual Report, listing the establishments reporting to the annual census of manufactures.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last annual report listing the names of respondents, was published for each industry. In most cases, these were the publications covering the year 1960. Since the previous report was prepared 2,091 new names have been added as a result of information received. During the same period 559 names which appeared in the December 1963 issue have been dropped from the listings for various reasons, such as going out of business, not manufacturing, duplication due to change of name, etc. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry Division. This, however, has been kept to a minimum.

NUMBER OF NEW MANUFACTURING ESTABLISHMENTS, 1954-63

The following material presents in tabular form the number of manufacturing establishments reporting for the first time in the annual Census of Manufactures in each year from 1954 to 1963 and which are still active in the manufacturing field. Data for the years 1958 to 1963 are the results of a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations commenced during those years. Data for the more recent years are subject to revision when the establishments concerned have reported in the annual Census of Manufactures and more solid information is available.

Data summarized in Table 1 show a decline in all years under review, when compared with corresponding tabular material in the June, 1963 issue of this publication. This is due in part to reclassification to the non-manufacturing field resulting from the application of the new concept of a manufacturing establishment, as well as firms going out of business. During the year 1963 the coverage of new firms was much more extensive as a result of a cooperative arrangement with other government departments. This accounts for the sharp increase noted for that year which, however, is subject to revision.

Throughout the period the Wood, Furniture and Fixtures Industries accounted for 25.9 per cent of the total number of new establishments, the Foods and Beverages, the Metal and Machinery Industries and the Clothing Industries together accounted for an additional 36.2 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries 8.7 per cent and 7.9 per cent respectively.

Regional distribution (Tables 1A to 1E) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, each of which accounted for more than 30 per cent of the total, followed by British Columbia with 15 per cent and the Prairies and Maritimes with 12 per cent and 6 per cent respectively. This regional pattern is followed generally in all industries except Clothing, Wood and Metal Fabricating and Machinery. In the Clothing Industry the heaviest concentration of new firms is in the province of Quebec, which accounts for about 70 per cent of the total in this Industry. British Columbia reports the greatest number of new firms in the Wood Industry with Quebec and the Maritimes also showing a large number of new businesses in this field. In the Maritimes the number of new firms classified to the Food and Beverage Industry and the Wood Industries accounts for 65 per cent of the total new firms in that area. In the Metal Fabricating and Machinery Industries, 50 per cent of the new entrants in these fields are in Ontario.

Breakdown by country of origin (Table 4 and 5) reveals that 998 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 831 (over 62 per cent of which were in Ontario), accounting for 83 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries followed by the Chemical Products and the Miscellaneous Manufacturing Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Food and Beverage Industries, where domestic raw materials are readily available. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report is published as a supplement to the previous issue published in June 1964, and is made up of all new manufacturing establishments in Canada that have come to our attention since that time. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently or report that they expect to be in operation in the near future. Firm names have been arranged by industry and by province within each industrial group.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been so indicated by the firms listed but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The next issue of this report will be the annual publication dated June 1965. It will contain the names of all new manufacturing establishments not yet included in a publication resulting from the annual Census of Manufactures.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date all data including the supplementary issue published in December 1964. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this report will be published every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification which shows twenty major manufacturing groups. A complete listing of establishments in operation or about to start operations in any one industry can be secured by using this memorandum along with the most recent Industry Division Annual Report, listing the establishments reporting to the annual census of manufactures.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last annual report listing the names of respondents, was published for each industry. In most cases, these were the publications covering the year 1960. Since the previous report was prepared 994 new names have been added as a result of information received. During the same period 1,373 names which appeared in the June and December 1964 issues have been dropped from the listings for various reasons, such as going out of business, not manufacturing, duplication due to change of name, etc. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry Division. This, however, has been kept to a minimum.

NUMBER OF NEW MANUFACTURING ESTABLISHMENTS, 1955-64

The following materials presents in tabular form the number of manufacturing establishments reporting for the first time in the annual Census of Manufactures in each year from 1955 to 1964 and which are still active in the manufacturing field. Data for the years 1958 to 1963 are the results of a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations commenced during those years. Data for the more recent years are subject to revision when the establishments concerned have reported in the annual Census of Manufactures and more solid information is available.

During the years 1963 and 1964 the coverage of new firms was much more extensive as a result of a cooperative arrangement with other government departments. This accounts for the sharp increase noted for these years which, however, is subject to revision.

Throughout the period the Wood, Furniture and Fixtures Industries accounted for 25.3 per cent of the total number of new establishments, the Foods and Beverages, the Metal and Machinery Industries and the Clothing Industries together accounted for an additional 37.7 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries 9 per cent and 7.9 per cent respectively.

Regional distribution (Tables 1A to 1E) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, each of which accounted for more than 30 per cent of the total, followed by British Columbia with 15 per cent and the Prairies and Maritimes with 12 per cent and 6 per cent respectively. This regional pattern is followed generally in all industries except Clothing, Wood and Metal Fabricating and Machinery. In the Clothing Industry the heaviest concentration of new firms is in the province of Quebec, which accounts for about 75 per cent of the total in this Industry. British Columbia reports the greatest number of new firms in the Wood Industry with Quebec and the Maritimes also showing a large number of new businesses in this field. In the Maritimes the number of new firms classified to the Food and Beverage Industry and the Wood Industries accounts for 65 per cent of the total new firms in that area. In the Metal Fabricating and Machinery Industries, 50 per cent of the new entrants in these fields are in Ontario.

Breakdown by country of origin (Tables 3 and 4) reveals that 1,018 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 857 (over 63 per cent of which were in Ontario), accounting for 84 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries and Chemical Products followed by the Miscellaneous Manufacturing Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Food and Beverage Industries, where domestic raw materials are readily available. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report is published as a supplement to the previous issue published in June 1965, and is made up of all new manufacturing establishments in Canada that have come to our attention since that time. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently or report that they expect to be in operation in the near future. Firm names have been arranged by industry and by province within each industrial group.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been so indicated by the firms listed but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The next issue of this report will be the annual publication dated June 1966. It will contain the names of all new manufacturing establishments not yet included in a publication resulting from the annual Census of Manufactures.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date all data including the supplementary issue published in December 1965. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this report will be published every six months.

The listing comprises the names of firms that have not been in business before as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification which shows twenty major manufacturing groups. A complete listing of establishments in operation or about to start operations in any one industry can be secured by using this memorandum along with the most recent Industry Division Annual Report, listing the establishments reporting to the annual census of manufactures.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last annual report listing the names of respondents, was published for each industry. In most cases, these were the publications covering the year 1963. Since the previous report was prepared 1,107 new names have been added as a result of information received. During the same period 2,695 names which appeared in the June and December 1965 issues have been dropped from the listings for various reasons, such as going out of business, not manufacturing, duplication due to change of name, etc. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry Division. This, however, has been kept to a minimum.

NUMBER OF NEW MANUFACTURING ESTABLISHMENTS, 1956-65

The following materials presents in tabular form the number of manufacturing establishments reporting for the first time in the annual Census of Manufactures in each year from 1956 to 1965 and which are still active in the manufacturing field. Data for the years 1958 to 1963 are the results of a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations commenced during those years. Data for the more recent years are subject to revision when the establishments concerned have reported in the annual census of Manufactures and more solid information is available.

During the years 1963 and 1964 the coverage of new firms was much more extensive as a result of a cooperative arrangement with other government departments. This accounts for the sharp increase noted for these years.

Throughout the period the Wood, Furniture and Fixtures Industries accounted for 4.7 per cent of the total number of new establishments, the Foods and Beverages, the Metal and Machinery Industries and the Clothing Industries together accounted for an additional 37 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries 9 per cent and 7.5 per cent respectively.

Regional distribution (Tables 1A to 1E) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, each of which accounted for more than 30 per cent of the total, followed by British Columbia with 14 per cent and the Prairies and Atlantic Regions with 12.5 per cent and 6 per cent respectively. This regional pattern is followed generally in all industries except Clothing, Wood and Metal Fabricating and Machinery. In the Clothing Industry the heaviest concentration of new firms is in the province of Quebec, which accounts for about 74 per cent of the total in this Industry. British Columbia reports the greatest number of new firms in the Wood Industry with Quebec and the Atlantic Regions also showing a large number of new businesses in this field. In the Atlantic Regions the number of new firms classified to the Food and Beverage Industry and the Wood Industries accounts for 62 per cent of the total new firms in that area. In the Metal Fabricating and Machinery Industries, 50 per cent of the new entrants in these fields are in Ontario.

Breakdown by country of origin (Tables 3 and 4) reveals that 1,037 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 865 (over 63 per cent of which were in Ontario), accounting for 83 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries and Chemical Products followed by the Miscellaneous Manufacturing Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Food and Beverage Industries, where domestic raw materials are readily available. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report is published as a supplement to the previous issue published in June 1966, and is made up of all new manufacturing establishments in Canada that have come to our attention since that time. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently or report that they expect to be in operation in the near future. Firm names have been arranged by industry and by province within each industrial group.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been so indicated by the firms listed but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The next issue of this report will be the annual publication dated June 1967. It will contain the names of all new manufacturing establishments not yet included in a publication resulting from the annual Census of Manufactures.
